

Altitude Sickness Guide

Quick reference guide for mountain trekkers

Golden Rule

Never go higher with symptoms. If breathing is hard or the person is confused/unsteady, descend now.

(AMS)

Acute Mountain Sickness

SYMPTOMS

Headache

Rapid heartbeat

Breathless

Dizziness

Insomnia

Fatigue

No appetite

Nausea

PREVENTION

Slow Ascend

Stay hydrated (3-4L)

Avoid alcohol

Rest

HAPE

High-Altitude Pulmonary Edema

SYMPTOMS

Chest congestion

Rapid heartbeat

Breathless

Dry Cough

Blue Lip

Energy less

Rapid breathing

Breathless at rest

PREVENTION

Ascend Gradually

Avoid overexertion

Take acclimatization

Rest

HACE

High-Altitude Cerebral Edema

SYMPTOMS

Severe Headache

Drowsiness

Confusion

Loss of coordination

Unsteady walking

Altered behavior

Stupor

Coma in late disease

PREVENTION

Ascend Gradually

Dexamethasone for treatment

Acetazolamide for prevention

(AMS) Acute Mountain Sickness

WHAT IT IS?

Acute Mountain Sickness (AMS), often called High Altitude Sickness, occurs when your body doesn't have enough time to adjust to lower oxygen levels at higher elevations. It is a natural physiological response, but one that demands immediate attention and respect. Think of it as your body's signal to slow down and breathe.

PREVENTION TIPS

- ✓ Ascend slowly (no more than 300-500m per day above 3,000m)
- ✓ Stay hydrated (3-4 liters per day)
- ✓ Avoid alcohol and sleeping pills
- ✓ Eat light, high-carb meals
- ✓ Listen to your body and rest when needed

(HAPE) High-Altitude Pulmonary Edema

WHAT IT IS?

Acute Mountain Sickness (AMS), often called High Altitude Sickness, occurs when your body doesn't have enough time to adjust to lower oxygen levels at higher elevations. It is a natural physiological response, but one that demands immediate attention and respect. Think of it as your body's signal to slow down and breathe.

PREVENTION TIPS

- ✓ Ascend slowly (no more than 300-500m per day above 3,000m)
- ✓ Stay hydrated (3-4 liters per day)
- ✓ Avoid alcohol and sleeping pills
- ✓ Eat light, high-carb meals
- ✓ Listen to your body and rest when needed

(HACE) High-Altitude Cerebral Edema

WHAT IT IS?

Acute Mountain Sickness (AMS), often called High Altitude Sickness, occurs when your body doesn't have enough time to adjust to lower oxygen levels at higher elevations. It is a natural physiological response, but one that demands immediate attention and respect. Think of it as your body's signal to slow down and breathe.

PREVENTION TIPS

- ✓ Ascend slowly (no more than 300-500m per day above 3,000m)
- ✓ Stay hydrated (3-4 liters per day)
- ✓ Avoid alcohol and sleeping pills
- ✓ Eat light, high-carb meals
- ✓ Listen to your body and rest when needed
